The Duke University/CFO Global Business Outlook survey polls a wide range of companies (public and private, small and large, many industries, etc.), with the distribution of responding firm characteristics presented in online tables. The responses are representative of the population of CFOs that are surveyed. Confidence ranges are reported in the online top line and banner tables for most of the numeric variables. A typical confidence range is less than one percentage point (e.g., capital spending is expected to increase by 6.8 percent with a 95 percent confidence range of 6.2 percent to 7.3 percent, which is a 0.9 percent confidence interval).

Among the industries represented in the survey are retail/wholesale, mining/construction, manufacturing, transportation/energy, communications/media, technology, service/consulting and banking/finance/insurance. The average growth rates are weighted by revenues or number of employees. For example, one $\$ 5$ billion company affects an average as much as $10 \$ 500$-million firms would.

Revenue-weighted mean growth rates are provided for earnings, revenues, capital spending, technology spending, and prices of products. Employee-weighted mean growth rates are used for health care costs, productivity, number of employees, and outsourced employment. The earnings, dividends, share repurchases and cash on balance sheet are for public companies only. Unless noted, all other numbers are for all companies, including private companies.Table of Contents
